

Testing for Coronavirus COVID-19

If you or someone you live with becomes poorly you may have a test for Coronavirus.

- A **high temperature**
- A **new dry cough**
- Lots of new **coughing** for more than one hour.
- **3** or more **new coughs** in a day.
- A **change or loss** of what you can **taste or smell**.

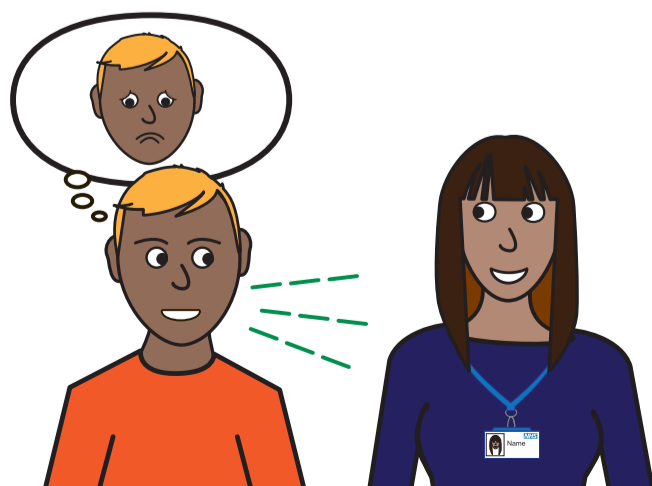

The Nurse or Doctor will

- Wipe one **swab** or large **cotton bud** at the back of your **throat**.
- Use another **swab** or large **cotton bud** and gently rub it around the inside of your nose.

The test is not nice, but it will **not hurt** and will not take long.

The **cotton buds** will then be taken away and **tested**.

Your Doctor or Nurse will get the result in **2 days**.

When the results come back, **staff will tell** you what they are.

Staff will tell you what will happen next.
