

Leeds Learning Disability Health Facilitation Team RESTORE2 mini and Pulse Oximetry Pilot Scheme.

JOIN US TO IMPROVE HEALTH OUTCOMES FOR PEOPLE WITH LEARNING DISABILITY.

We want to help carers recognise the early signs of deteriorating health in people with learning disability and give them a tool with which they can effectively communicate and escalate their concerns, resulting in the people they care for receiving the care they need at the right time.

We know that people get better more quickly and avoid devastating complications of serious illness if they are treated early.

This pilot scheme involves:

- **A training session for carers**
- **Pre- and post-training feedback surveys**
- **A pulse oximeter for each service**
- **A resources pack which contains**
 - o **Easy read guide “What is a Pulse Oximeter”**
 - o **Easy read guide “How to use a Pulse Oximeter”**
 - o **Easy read guide “Record results and what to do”**
 - o **Daily Pulse Oximeter Chart**
- **Ongoing peer support led by a senior member of staff or clinician**
- **GPs will be made aware of the scheme so we can all work together**
- **The opportunity to be a part of important research to set good standards of care for all people with learning disability**

We hope to be able to develop this pilot scheme so that it becomes a service that all carers for people with learning disability in Leeds receive as standard. This includes carers in supported living services, care homes and those family and unpaid carers who look after relatives, friends and neighbours who have learning disabilities.
