

You have moderate risk feet

diabetes information and advice leaflet

Emergency Action Plan FOOT ATTACK?

If your foot is red, swollen or if you have breaks in the skin

PHONE 07786250788 IMMEDIATELY.

**Emergency
Department**

If you are unable to get through consider contacting an Out of Hours service or Accident and Emergency

Diabetes can cause foot problems.

It can affect:

• the feeling in your feet

• the circulation, or blood flow, in your feet

You might not notice the changes in your feet. You have high risk feet so it is important that you have regular checks by a podiatrist. You can then agree a treatment plan.

Your screening and assessment has shown there is a moderate risk that you will develop foot ulcers.

Your healthcare professional will tick which of the risks you have:

you have lost some feeling in your feet

the shape of your foot has changed

the circulation in your feet is reduced

your vision is impaired

you have hard skin on your feet

you cannot look after your feet yourself

You can help stop feet problems by good control of your

diabetes

cholesterol

blood pressure

If you smoke, you are strongly advised to stop.

Doing what this leaflet says will help you take care of your feet.

To keep your feet healthy

Check your feet every day

check for any blisters

pain

breaks in the skin

signs of infection like

swelling, heat, redness

Ask someone to help you if you cannot do this yourself.

Wash your feet everyday

- Make sure the water is not too hot. Test it with your elbow or ask someone else to.
- Wash your feet in warm water with a mild soap.
- Rinse your feet.
- Dry your feet carefully.
- Do not soak your feet as this can damage the skin.
- Do not use heat pads directly on skin.

Moisturise your feet every day

If your skin is dry use a moisturising cream every day, but not between your toes

Toenails

- Cut or file your nails regularly following the curve of the end of your toe.
- Use a file to make sure there are no sharp edges.
- Do not cut down the sides of your nails – this can cause an ingrown toenail.

Socks, stockings and tights

- Change your socks, stockings or tights every day.
- Do not wear socks with big seams or elastic tops.

Avoid walking barefoot

You could hurt your feet by stubbing your toe or standing on sharp objects.

Check your shoes

- Check the bottom of your shoe to make sure there is nothing sharp stuck in it, like a
 - pin
 - nail
 - piece of glass
- Check inside the shoe with your hand to make sure there is nothing inside, like a stone

Badly-fitting shoes

The person who looked at your feet will be able to give you advice about the shoes you are wearing and buying new shoes so they do not damage your feet.

Minor cuts and blisters

- If you find any cuts or blisters when you check your feet you need to cover them with a sterile dressing and check them every day.
- Do not burst blisters.
- If the problem does not get better you should contact The Leeds Foot Protection Service (contact number over the page) or your doctor.

Hard skin and corns

- Do not try to remove hard skin or corns yourself.
- Your podiatrist will provide treatment or advice.

Over-the-counter corn remedies

People with diabetes should not use over-the-counter corn remedies as they can damage the skin.

Avoid high or low temperatures

- Wear socks if your feet are cold.
- Don't sit with your feet in front of the fire to warm them up.
- Take hot water bottles or heating pads out of your bed before you get in.

If you discover any problems with your feet, contact your local GP for advice
